

DRESTER DYNAMIC TRIPLE BY HEDSON

Convenient operation

The transfer of the solvents between the gun cleaner and the recycler is fully automated; the dirty, heavy and hazardous manual solvent handling is eliminated and at the same time the equipment and floor in the workshop sustains clean. Instantly after the transfer of solvents, access to clean solvent in the gun cleaner is available. The system allows for the units to be placed either close together or in separate rooms up to 25 meters (subject to local fire legislation). The convenient operation of the Drester Dynamic Triple by Hedson system encourages to run the system often. This keeps the solvent in the gun cleaner in better condition, resulting in improved gun cleaning performance. The consumption of solvent is reduced, the waste of solvent is kept to a minimum and costs are cut dramatically
