

IRT UV SPOTCURE BY HEDSON

IRT UV SpotCure

Active safety systems in vehicles are increasingly preventing and reducing damage. In the future, this trend will continue and will increase the pressure on bodyshops to work more efficient and profitable. With UV SpotCure, curing will reduce from minutes into seconds.

- Fast curing time
- Low-temperature processing
- Minimal maintenance
- Better for the environment
- Safe for use in your shop

INTENSITY & PRECISION

UV SpotCure ensures UV-paint materials to be 100% cured and enables reliable paint processes in body shops. Low energy consumption and a long LED lifetime keep the cost per curing job very low. Overall maintenance is reduced and the elimination of a warm-up cycle reduces technician downtime

SAVE MONEY

The LED lamps work at lower temperatures than standard UV bulbs, providing an added margin of safety for your shop. With built-in fans, the UV-A LED's and internal components are kept cool, reducing the risk of overheating the units, also extending the lifetime of the lamps to beyond 20,000 hours, with a minimal loss of curing power over that time

EASY TO USE

With the highest UV light intensity compared to other curing devices on the market, the UV SpotCure generates more UV-A intensity in a shorter time and more precisely, enabling the user in moving the unit in the same way as when painting with a spray gun, with no risk of damaging the surface

IRT UV SPOTCURE

IRT UV SpotCure	Part.no. 750746
Voltage	220-240V, 1Ph/PE
Frequency	50 - 60 Hz
Fuse	10 A
Current	1.7 A
Measurements (W/H/D)	147/195/160 mm (5.8"/7.7"/6.3")
Power	0.4 kW
Cord length	8 m (31")
Noise Level	<70 dB (A)
